

## PROJECT HIGHLIGHT

### Berm Construction at MOTSU

CWC is wrapping up work at Military Ocean Terminal Sunny Point (MOTSU), where our team successfully constructed and repaired large protective berms. This critical earthwork project enhances site security and environmental resilience, demonstrating our continued commitment to delivering high-quality civil construction solutions.

### New NASA Project on the Horizon

CWC was recently awarded a new contract at NASA’s Kennedy Space Center to assist with shoreline restoration and protection efforts. Operations will begin soon, marking another opportunity to apply our expertise in shoreline management and infrastructure improvement.

### Storm Safety, Staying Prepared

Storm safety is a vital part of how we protect our people, projects, and the environment—especially during peak storm season. Our crews are trained to secure job sites quickly, reinforce erosion control systems, and verify that all drainage infrastructure is operating as designed. By staying prepared and prioritizing safety, we ensure that CWC jobsites remain compliant, no matter what the forecast brings.

### Employee Spotlight

José Rivera is a dedicated team member known for his strong work ethic, reliability, and positive attitude. Whether operating equipment or tackling tough challenges in the field, José consistently delivers high-quality work and supports his team with professionalism and pride. His leadership on the job site sets a great example for those around him. We’re proud to have him as part of the CWC family.
